EXPERIENCE

Software Engineer
Cambridge University Press and Assessment, Makati, Metro Manila *Jan 2025 – Present*
Technologies: Java, Spring Boot, JavaScript, Node.js, Python, MySQL, MongoDB, Git, Docker, Kubernetes, Jenkins, AWS, Redis, Elasticsearch

- **Improved code quality and reduced post-deployment defects** by implementing code reviews, including systematic evaluation of AI-generated code from GitHub Copilot within the SDLC workflow.
- **Accelerated development velocity and reduced manual effort** by developing Python automation scripts and reusable backend components used across the engineering team.
- **Maintained high system reliability and minimized downtime** by debugging and resolving production issues across test and live environments and applying root-cause analysis to prevent recurrence.
- **Strengthened application security and scalability** by designing and developing backend services following clean, secure, and efficient engineering best practices.
- **Improved knowledge sharing and reduced onboarding time** by leading technical sessions and creating comprehensive engineering documentation for new team members.
- **Enhanced cross-functional delivery and solution alignment** by analyzing business requirements and translating them into actionable technical designs for stakeholders and development teams.

Software Engineer
Marlow Navigation Philippines Inc., Malate, Metro Manila *Apr 2023 – Jan 2025*
Technologies: Java, Spring Boot, Kotlin, Ktor, C#, ASP.NET Core, WinForms, PostgreSQL, MySQL, Microsoft SQL Server

- **Reduced third-party data entry workload by 90%** by integrating an external API with the internal database and automating bidirectional data synchronization, eliminating manual processes.
- **Improved backend response times for high-traffic APIs** by optimizing database queries and refining service architecture across production systems.
- **Increased operational efficiency and reduced human error** by automating user privilege assignments through backend scripting, eliminating repetitive administrative tasks.
- **Improved system reliability and maintainability** by delivering well-documented RESTful APIs supported by comprehensive unit testing and technical documentation.
- **Expanded product functionality** by contributing to the development and maintenance of Windows desktop (**WinForms**) and web application UI components across multiple projects.

Data Analyst
M Technologies Network and Data Solution, Sta. Maria, Bulacan *Aug 2022 – Jan 2023*
Technologies: Microsoft SQL Server, SQL Server Integration Services

- **Improved data processing performance and reduced system load** by developing and optimizing stored procedures, enabling faster query execution across large enterprise datasets.
- **Ensured data consistency and integrity across the data warehouse** by designing ETL pipelines with automated validation rules and integration workflows.
- **Enabled data-driven decision-making** by analyzing large datasets to identify actionable insights that supported cross-department optimization initiatives.

EDUCATION

Bachelor of Science in Information Systems
Immaculate Conception I-College of Arts and Technology *Aug 2018 – Jun 2022*

- Programmer of the Year
- Best in Capstone Project

SKILLS

Languages: Java, Kotlin, C#, JavaScript, TypeScript, Python
Frameworks and Libraries: Spring Boot, Ktor, .NET, ASP.NET Core, WinForms, Node.js
Databases: MySQL, MongoDB, PostgreSQL, Microsoft SQL Server
Tools and Platforms: Git, Jenkins, Kubernetes, Docker, AWS, Redis, Elasticsearch
AI Developer Tools: GitHub Copilot, Claude Code
